

Pediatric Neuroradiologist

Phoenix Children's

Location: Phoenix, Arizona

Type: Full-Time

Department: Radiology

Phoenix Children's is recruiting a full-time Pediatric Neuroradiologist to join one of the country's largest and most complex freestanding pediatric health systems, with the option for a 100% pediatric neuroradiology practice, a flexible hybrid schedule, and real work-life balance.

Why This Role Stands Out

- Option for 100% subspecialty practice. A full spectrum of pediatric neuroimaging within a large complex quaternary referral population.
- Flexible hybrid model. Full diagnostic home PACS workstations support onsite and remote scheduling flexibility for every radiologist.
- A growing, well-resourced department. 29 radiologists across Neuro, Body, IR, and Emergency sections, backed by a full-time PhD Imaging Scientist and academic ties to Barrow Neurological Institute.
- Ground floor of major expansion. Phoenix Children's is developing additional hospital and outpatient facilities across the region, and the Department of Radiology is expanding its faculty across multiple subspecialties to match.

Our Team Phoenix Children's Department of Radiology consists of 29 radiologists:

Neuro (8), Body (14), IR (4), and Emergency (3). Overnight image interpretation and consultations are covered by the Emergency Radiology section. All radiologists have full home PACS workstations, and a hybrid onsite/remote schedule is standard practice. Dedicated pediatric anesthesiologists provide anesthesia services as needed.

Subspecialty Practice

The Pediatric Neuroradiology division maintains a highly focused, 100% subspecialty practice encompassing the full spectrum of pediatric neuroimaging. Candidates with fellowship training in Neuroradiology or Pediatric Radiology with subspecialty expertise in Pediatric Neuroradiology including current fellows are encouraged to apply. Neuroradiology faculty hold additional academic appointments in the Department of Neuroradiology at Barrow Neurological Institute.

Qualifications:

- M.D. or D.O. (or equivalent), board-certified or eligible in Diagnostic Radiology
- ACGME Fellowship training in Neuroradiology, or Pediatric Radiology with subspecialty expertise in Pediatric Neuroradiology
- ABR Certificate of Added Qualification (CAQ) in Pediatric Radiology or Neuroradiology, or eligible.
- Eligible for medical licensure in the State of Arizona Research and Education
Phoenix Children's Radiology faculty hold academic appointments with the University of Arizona College of Medicine (Phoenix), Mayo Clinic Alix School of Medicine (Scottsdale), and Creighton University School of Medicine (Phoenix).
- ***The department runs an active teaching and research program, including:***
 - 3 ACGME-accredited Pediatric Radiology fellow positions
 - Dedicated advanced fellowship training in Pediatric Neuroradiology and Pediatric Interventional Radiology
 - Residents, fellows, and medical students from affiliated academic programs
 - A full-time PhD Imaging Scientist supporting an active clinical and translational research program.

Phoenix Valley:

A Market on the Rise The Phoenix Metro Area is one of the largest and fastest-growing regions in the country, and Phoenix Children's is expanding to match. A new pediatric hospital featuring 60 NICU beds, 6 operating rooms, and a 24-room Emergency Department opens in February 2027.

To support this growth, the Radiology Department is recruiting several additional pediatric radiologists across sections, offering a rare opportunity to help shape a growing subspecialty practice in a location known for its sunshine and exceptional quality of life.
